Wine description

Very intense, aromatic nose, showing notes of exotic fruits like mango, lychee or citrus, as well as floral flavours with a light smokey finish. Due to its early ripeness and high sugar levels the variety is predestined for producing dessert wines. For production of dry wines grapes should be harvested at max. 22°Brix to prevent aroma loss.

Degree of resistance

Downy mildew			high	
Powdery mildew		medium		
Botrytis			high	

Resistance loci (current status)

Downy mildew	Powdery mildew		Black rot

Viticultural characteristics

7 - 11 t/ha	20.9 - 25.3 °Brix
Vine vigour	strong
Bud break	early
Time of maturity	mid-season
Bunch density	medium
Berry skin hardness	medium
Cluster size	small - medium
Berry set	medium
Stem necrosis	medium
Growth habit	bushy, few tendrils, short internodes
Time of bloom	early

Special characteristics

- Berries remain green, even at high must weight levels
- High number of watershoots, recommendation: plant highstem vines
- Good fertility of basal buds
